## PROFILE

Hardworking and self-driven IT student pursuing a Bachelor of Computing at Belgium Campus iTversity, with a strong interest in web development, problem-solving, and artificial intelligence. Co-founder of TK Digital Studio, building responsive, multi-page websites for local businesses across various industries. Has led project planning, built data-driven simulation tooling, and deployed live production applications. Combines a technical mindset with a creative eye for design, developed through digital art and illustration. Quick to learn new technologies and genuinely enjoys fixing and building things.

## SKILLS

- Web development: HTML, CSS, JavaScript, responsive multi-page website design
- Backend & databases: Java, C#/.NET, Python, PostgreSQL, JDBC, Node.js, Express, MongoDB, EJS
- Front-end & data visualization: Chart.js, Three.js effects, PWA setup, SEO/structured data (JSON-LD), dark mode
- Tools & deployment: IntelliJ IDEA, Visual Studio, Git, xUnit, Render — plus daily use of AI tools (Claude, Gemini) for development and research
- Project management: Work Breakdown Structures, effort estimation, task allocation across backend, frontend and DevOps roles
- Soft skills: problem-solving, self-directed learning, attention to detail, teamwork, leadership, clear communication

## EXPERIENCE & PROJECTS

### ABM.NET Framework — Distributed Agent-Based Modelling System

*2026 – Present*

*Final-year group project, PRJ381, Belgium Campus iTversity — team of 7*

- **Project Planning & Leadership:** Directed the project's Work Breakdown Structure (WBS), dividing the full system architecture into manageable task packages, estimating effort durations, and assigning responsibilities across backend, frontend, and DevOps roles
- **Configuration Module:** Built the scenario setup module, parsing JSON/YAML files into a validated SimulationConfig object consumed by the core engine; implemented validation that surfaces all configuration errors in a single pass before execution; defined the module's public interface so teammates building the agent logic and persistence layers could integrate independently
- **Batch Experimentation (Compare Feature):** Engineered the Monte Carlo batch runner dashboard, enabling researchers to execute up to 100 concurrent simulation runs in the background using isolated random seeds for statistical validation
- **Data Aggregation:** Developed the results aggregation engine to calculate and display cross-run metrics, including the average, lowest, highest, and standard deviation (spread) for key simulation outcomes
- **Visualization & Export:** Implemented dynamic charts using Chart.js to plot average trajectories alongside shaded statistical spread bands, and built a one-click CSV export for external data analysis

### CivicConnect — Municipal Issue Reporting Web Application

*2026*

*Group project, SEN381, Belgium Campus iTversity — team of 2*

- Co-developed a municipal issue reporting web application in a joint team effort alongside a peer collaborator
- Managed the deployment pipeline, hosting the live production application on Render
- Finalized the release candidate and co-presented the final project defense in October 2026

### Freelance Web Developer — TK Digital Studio

*2025 – Present*

*Web design agency, Gauteng, South Africa — co-founded with business partner Oarabeng Khunou*

- Co-founded and operate the agency, delivering custom multi-page website solutions for local businesses
- Designed and built responsive websites for businesses across medical, hospitality, construction, and beauty industries, including Dr Andie Family Practice, Mpudulle Eye Centre, Julia Mathabathe (Clinical Psychologist), Wonderboom Car Service, and Filadelfia Secondary LSEN School
- Implemented advanced features including real-time open/closed indicators, WhatsApp integration, JSON-LD structured data for SEO, dark mode, and Three.js 3D visual effects
- Practiced end-to-end web design workflow, from concept and layout to development and client-style presentation
- Digitized physical business information into clean, structured digital formats as part of website builds

### University Cleaning Inventory & Issuance System — Java Swing Application

*2026*

*Group project, Programming 381 (Track B), Belgium Campus iTversity — team of 2*

- Built core application logic and the PostgreSQL/JDBC data layer as part of a two-person development team
- Set up and configured the IntelliJ IDEA project environment for the team
- Produced technical documentation and a narration script for the project's video presentation

**EventHub — Event Management Platform** *2026*

*Group project, WPR381, Belgium Campus iTversity*

- Delivered the front-end using Node.js, Express, MongoDB, and EJS as part of a team project
- Identified and resolved integration bugs in a teammate's backend code
- Prepared the full project presentation and coordinated peer communication

## EDUCATION

**Bachelor of Computing (Software Engineering)** *3rd Year — In progress*

*Belgium Campus iTversity*

**National Senior Certificate (Matric)** *2022*

*Charlton Vos College of Education*

## LANGUAGES

Setswana (Home Language) • English (Fluent) • Afrikaans (Basic) • Zulu (Basic)

## INTERESTS

Digital art & illustration • Website & product design • Artificial intelligence • Console hardware tinkering • Gaming (strategy & multiplayer) • Soccer • Music
